Design and Technology in Architecture. New York: Van Nostrand Reinhold, 1991.

Biographical/Historical Sketch

David Earl Guise was born on December 29th, 1931 in New York City. He was trained in architecture at the University of Pennsylvania (B.Arch. with honors, 1957) where he studied with Lewis Mumford, Louis I. Kahn, Robert Geddes, and Robert LeRicolais. He established his own firm in New York City in 1962. He was one of the founding faculty (1966) of the School of Architecture of the City College of New York, where he taught design and construction technology until retirement. He also served as visiting professor at the University of Pennsylvania and Columbia University, and taught in the A.I.A. Professional Continuing Education Program. His architectural design projects have appeared in several professional publications, including *Progressive Architecture*, *Architectural Record*, and *Detail* (Germany). His book, *Design and Technology in Architecture*, was published in 1985, with a revised edition in 1991.

Scope and Content Note

The David Guise collection comprises teaching and research files and an extensive collection of teaching slides, all focused on architectural design and construction technology. The files contain clippings, brochures, photographs and working drawings. The slides (many photographed by Guise during construction) document structural features of some of the best known buildings of the 20th century. The collection also contains a copy of the revised edition of Guise's *Design and Technology in Architecture* and an unpublished manuscript by August Komendant, "Philosophy of Technology for Architecture and Engineering."

Guise organized and indexed his own collection, and the materials have remained as received except that slides have been placed in archival slide pages. Wherever possible, materials are filed in order of Guise's numbering system. Slides found under a single index number (in boxes, projector magazines, projector carousels and reference files) are filed in Series II. A. A small number of projector carousels containing multiple index numbers proved difficult to separate. Slides from these carousels have been placed in slide pages in the same order as found in the carousels and filed in Series II. B. Slides lacking an index number are filed in Series II. C. Guise's indexes were drawn up some years before the collection was donated to the Architectural Archives. Some materials indexed were not found in the collection at the time of cataloging, and some materials in the collection are not included in the indexes.

Guise's teaching slides include a small number of his own architectural design projects. The collection contains no personal or biographical materials, no teaching records from City College of New York and no business records or architectural drawings from Guise's architectural practice.

Appendix A: Slide index, Alphabetical

[Notes: Guise's indexes were drawn up some years before the collection was donated to the Architectural Archives. Some materials indexed were not found in the collection at the time of cataloging, and some materials in the collection are not indexed. Typographical errors have been corrected when possible, but the alphabetical index is otherwise unchanged. The following are explanations provided by Guise for the use of this index. Some locations indicated were not found at processing: "binder"; "binder 1"; "binder 2"; "binder 5"; "binder-9;" "b-1"; "India"; "India 8"; "1992 binder"; "Italy II".

-
1. Single number in right margin is reference file and slide box number.
 2. Some slides have been combined into carousel trays for lecture grouping - they are additionally noted by a (carousel #) or c-# in right margin edge.
 3. Slides filed in binders are noted by binder number b-# in right margin edge, or by binder title such as "Italy".
 4. The number of slides of each building or topic is shown in the table of contents, which lists entries in numerical order.
 5. In a few instances, there are slides of buildings that do not have back-up reference material in the file folders. Also, in a few rare instances there is information in a file folder (usually working drawings) without any slides of the project. When either of these circumstances occurs, it has been noted.
 6. Slides are either in boxes which are in numerical order, binders, or in acetate holders within the file folders. Occasionally slides exist in both sequential boxes and in the file folder.
- Architect name entries and building name (or building type) entries are interfiled in these two styles:
